

MS-Z73DMES-24

MACDONALD SECURITY PRESSURE BALANCING SHOWER MIXER & DIVERTER

DESCRIPTION

The MS-Z73DMES-24 is a high security shower system that controls the temperature, diverts from hand shower to rose, has piezo electronic control, and detachable hand shower, all on the one panel.

Mixer rotates from cold through to hot position. The mixer has a pressure balancing cartridge that delivers constant water temperature, despite water pressure fluctuations. Control handle is lemon squeezer shape which offers easy to grip handle and ligature resistance.

The diverter allows the choice of outlet between shower rose and detachable hand shower (hand shower is only installed under staff control). Detachable hand shower has flow-stop when hose not connected.

Piezo switch connects to Warden electronic control (supplied and sold separately).

Refer to separate literature to ensure correct access panel is specified.

INSTALLATION

- Pressure range: 100-500kPa (300kPa recommended)
- Hand shower flow rate 6L/min
- Stainless steel handles, outlet, and panels
- Hand shower, hose & bayonet connection included
- Inwall mounting box for ease of installation and maintenance

NB: For information purposes only, talk with technical support for details and assistance.
